

Functional Requirements

1. Home Page

- Displays company hero video with overlay text.
- Projects section loads a list of projects (title, image, short description).
- Each project image links to its Behance album.
- Each video links to Vimeo.
- Partners, clients, and testimonials load dynamically.
- Contact info and social media icons are clickable.

2. Portfolio Page

Showcase the company's portfolio as a downloadable PDF file instead of displaying individual project cards or galleries.

Functional Requirements:

1. The **Portfolio** section will include a clear "Download Portfolio" button.
2. When clicked, the button triggers a **direct download** of the PDF file containing the company's full portfolio.
3. The PDF file will be stored either:
 - Locally on the server (e.g., /public/files/portfolio.pdf), or
 - Via an external link (e.g., Google Drive, Dropbox, or company cloud).
4. If the PDF link changes in the future, it can be easily updated without backend modification (through configuration or file replacement).
5. Display the **file size and last updated date** below the button for user transparency.

3. About Page

- Static content (company info, team, mission, etc.).
- Animations when scrolling.

4. Services Page

- Lists all services with titles, icons, and short descriptions.
- When user Click on any Service , it should display the projects of these services.
- Hover animations for each service card.

5. Contact Page

- Contains a contact form (Name, Email, Message).
- When the user submits, data is sent via API to backend for email or database storage.
- Success or error message shown after submission.

6. Dashboard

- Admin can log in securely (JWT/Cookies).
- Admin can add/edit/delete projects, testimonials, and clients.
- Admin can upload images and videos.
- Dashboard connects to database (MongoDB/MySQL).
